The House of My Mother

INSTANT #1 NEW YORK TIMES BESTSELLER “Heart-wrenchingly personal...dizzying.” —Rolling Stone From eldest daughter Shari Franke, the shocking true story behind the viral 8 Passengers family vlog and the hidden abuse she suffered at the hands of her mother, and how, in the face of unimaginable pain, she found freedom and healing. Shari Franke’s childhood was a constant battle for survival. Her mother, Ruby Franke, enforced a severe moral code while maintaining a façade of a picture-perfect family for their wildly popular YouTube channel 8 Passengers, which documented the day-to-day life of raising six children for a staggering 2.5 million subscribers. But a darker truth lurked beneath the surface—Ruby’s wholesome online persona masked a more tyrannical parenting style than anyone could have imagined. As the family’s YouTube notoriety grew, so too did Ruby’s delusions of righteousness. Fueled by the sadistic influence of relationship coach Jodi Hildebrandt, together they implemented an inhumane and merciless disciplinary regime. Ruby and Jodi were arrested in Utah in 2023 on multiple charges of aggravated child abuse. On that fateful day, Shari shared a photo online of a police car outside their home. Her caption had one word: “Finally.” For the first time, Shari will reveal the disturbing truth behind 8 Passengers and her family’s devastating involvement with Jodi Hildebrandt’s cultish life coaching program, “ConneXions.” No stone is left unturned as Shari exposes the perils of influencer culture and shares for the first time her battle for truth and survival in the face of her mother’s cruelty.

Fieldnotes, a Forensic

SHORTLISTED FOR THE 2011 GOVERNOR GENERAL'S AWARD Her painful legs refused to emerge. It was a question of a particular movement. A passage from analyses to terrifying hallucination. The pressure oozing out of her. Still nursing she held up the head. Her own singular sensation of pain. Ferociously archival proof of an event that left no other material. Fieldnotes, a forensic charts one forensic anthropologist's series of descents in the first decade of the new millennium - a decade when forensic discourses and experts became ubiquitous in popular culture and on the daily news. But the edgy, passionate and erudite writer of these fieldnotes is no Temperance Brennan or Kathy Reichs. Part parody of popular discourses on the forensic anthropologist, part exegesis of the fieldnote genre, and part response to the natural and human catastrophes that unfolded during the writing of this book, Eichhorn's second collection continues to explore the poetics and affective dimensions of knowledge making at the edges of poetry and fiction.

Sculpt Yourself

Synopsis: Lipamorph is a drug that lets you sculpt yourself. It's how so many female celebrities in the mid-2010s remained so thin while having such large butts. It loosens up the fat in your body, allowing you to choose your proportions. And it's just been legalized for sale in Chicago. Amber is a 24-year-old tech support worker by day, gay feminist blogger (and bad-sitcom aficionado) by night. She's been vocal about her disapproval of Lipamorph from the beginning, seeing it as another tool to reinforce patriarchal beauty standards; but as Lipamorph becomes more common, Amber's dissenting voice starts to matter less and less. Judie is Amber's younger sister, and seemingly her complete opposite; she loves pop music, pretty latte art, and dating men. After struggling with hating her body for most of her life, Judie has become borderline reliant on Lipamorph for self-confidence, much to Amber's dismay. Kelly is an artist currently working for the marketing firm on the floor above Amber's office. She's whip-smart, proudly bisexual, and strikingly beautiful ... and she's the woman Amber's fallen in love with. Told from these three women's points of view, Sculpt Yourself tackles body image, LGBT+ topics, and what it means to be a feminist in the 21st century

By the second half of the twentieth century, a new branch of materials science had come into being — crystalline materials research. Its appearance is linked to the emergence of advanced technologies primarily based on single crystals (bulk crystals and films). At the turn of the last century, the impending onset of the “ceramic era” was forecasted. It was believed that ceramics would play a role comparable to that of the Stone or Bronze Ages in the history of civilization. Naturally, such an assumption was hypothetical, but it showed that ceramic materials had evoked keen interest among researchers. Although sapphire traditionally has been considered a gem, it has developed into a material typical of the “ceramic era.” Widening the field of sapphire application necessitated essential improvement of its homogeneity and working characteristics and extension of the range of sapphire products, especially those with stipulated properties including a preset structural defect distribution. In the early 1980s, successful attainment of crystals with predetermined characteristics was attributed to proper choice of the growth method. At present, in view of the fact that the requirements for crystalline products have become more stringent, such an approach tends to be insufficient. It is clear that one must take into account the physical–chemical processes that take place during the formation of the real crystal structure, i.e., the growth mechanisms and the nature and causes of crystal imperfections.

While many people have come to question the claims of Travis Walton, many others are embracing the quasi-cult of Steven Greer. This writing explores these topics from a Christian perspective.

This book is a concise informative elucidation of all aspects of reproduction and development in annelids

covering from arenicola to tubifex. Annelids flourish between 4,900 m depth to 2,000 m altitude; some of them occur in unusual habitats like hydrothermal vents and subterranean aquatic system (stygobionts). A few have no gut and acquire adequate nutrients through osmotrophism and/or engaging symbiotic microbes. In the absence of exoskeleton to escape predation, the 17,000 speciose annelids have explored bewildering modes of reproduction; not surprisingly, 42–47% of them are brooders. With 13,000 species, polychaetes are gonochores but some 207 species of them are hermaphrodites. Clitellates are all hermaphrodites; of them, 76 species are parthenogens, of which 56 are earthworms. Regenerative potency of annelids ranges from an organ to an entire worm from a single 'seminal' segment. The head, tail and both together can be regenerated 21, 42 and 20 times, respectively. However, the potency is limited to ~1% of polychaetes and Heterogametic sex determination is reported to occur only in six polychaete species, although karyotype is known for 83 annelid species. In temperate polychaetes, a dozen neuroendocrines, arising mostly from the 'brain' regulates reproductive cycle. A complete chapter devoted to vermiculture, (i) recognizes the fast-growing candidate species, (ii) distinguishes 'layers' from 'brooders', (iii) indicates that the harvest of oligochaetes may reduce the input of nitrogenous fertilizer in the ricefield, and (iv) explores the scope for increasing wealth from waste.
