The 'bible' of occupational health, *Fitness for Work* is the most in-depth and comprehensive resource available on the relationship between ill health and employment. The specialist advice given covers health hazards in the work place, fitness for work, and rehabilitation after illness or injury. A truly current source, it discusses the social aspects of work, and problems associated with our ageing workforce and changing population. Communicating occupational health advice to patients, employees, and doctors, *Fitness for Work* improves relationships in the workplace. It details the impact of a patient's health on work, and how they can be supported to gain or remain in employment. This invaluable source argues that in a suitable role, an employee can derive immense benefits to their health and well-being from work. Importantly, this comprehensive title also presents tactics on how to reduce inappropriate barriers to work for those who have overcome an injury or disease, and those who live with chronic conditions. Fully revised and updated, the sixth edition of *Fitness for Work* is based on the latest research evidence and clinical advances. The first half of the book focuses on the general principles of fitness to work and occupational health practice, such as legal aspects, ethical principles, health promotion, health surveillance and general principles of rehabilitation. In addition, it advises on sickness absence, ill health retirement, medication, transport, vibration and travel. In the second half of the book, chapters are arranged by clinical speciality or topic, and are co-authored by a topic specialist and a specialist occupational physician providing a comprehensive view of the subject. For effortless reference, each specialty chapter outlines the conditions covered, their prevalence and impact, and discusses the clinical aspects and treatment that affects work capacity. All recommendations are evidence-based and make use of the NICE guidelines. The definitive text on the relationship between health and work, *Fitness for Work* delivers a wealth of valuable consensus guidance, codes of practice, and locally evolved standards. This highly-regarded resource is essential for all occupational health practitioners.

The Madrid International Plan of Action on Ageing (MIPAA), adopted at the Second World Assembly on Ageing, is the first international agreement that specifically recognises the potential of older people to contribute to the development of their societies. In monitoring its implementation two key approaches are evident: a qualitative bottom-up participatory approach and an approach that uses quantitative indicators to monitor sustainable progress and policies. With the European Centre for Social Welfare Policy and Research, playing a pivotal role in the monitoring of the implementation process, one of its key tasks has been to develop a list of 'indicators of achievement'. This book contains extended and revised versions of policy

briefs and background papers that support the implementation monitoring process. The analyses included in these chapters make concrete suggestions towards quantitative indicators, with the aim of assisting national governments in mainstreaming ageing in their policies. The contributors provide an overview of the current situation with respect to population ageing and its consequences and also provide projections for the future. The book also includes the final list of quantitative indicators that arose out of consultations with international experts, related to the four main topics addressed: demography, income and wealth, labour market participation, and social protection and financial sustainability.

Coral Reef Fishes is the successor of The Ecology of Fishes on Coral Reefs. This new edition includes provocative reviews covering the major areas of reef fish ecology. Concerns about the future health of coral reefs, and recognition that reefs and their fishes are economically important components of the coastal oceans of many tropical nations, have led to enormous growth in research directed at reef fishes. Coral Reef Fishes is much more than a simple revision of the earlier volume; it is a companion that supports and extends the earlier work. The included syntheses provide readers with the current highlights in this exciting science. - An up-to-date review of key research areas in reef fish ecology, with a bibliography including hundreds of citations, most from the last decade - Authoritative, up-to-date, provocative chapters written to suggest future research priorities - An important companion and successor to The Ecology of Fishes on Coral Reefs - Includes discussions of regulation of fish populations, dispersal or site fidelity of larval reef fishes, sensory and motor capabilities of reef fish larvae, and complexities of management of reef species and communities

Mainstreaming Ageing

This book brings together the findings of economists on the effectiveness of price and non-price policy initiatives to combat smoking and draws conclusions regarding the efficacy of the various policy measures. The book will be essential reading for policy makers, health practitioners and researchers in health economics.

Mortimer (sociology, U. of Minnesota) and Shanahan (sociology, U. of North Carolina at Chapel Hill) present a handbook that overviews the theoretical perspectives, concepts, and methodological approaches that animate life course studies in social psychology. Thirty-four chapters are organized into sections that discuss variability in life course across historical and cross-national settings, normative age-grading of the life course as reflective of social structures, the way life courses reflect social institutions, and individual-level processes of motivation in the life course. Soils, invaluable indicators of the nature and history of the physical and human landscape, have strongly influenced the cultural record left to archaeologists. Not only are they primary reservoirs for artifacts, they often encase entire sites. And soil-forming processes in themselves are an important component of site formation, influencing which artifacts, features, and environmental indicators (floral, faunal, and geological) will be destroyed and to what extent and which will be preserved and how well. In this book, Holliday will address each of these issues in terms of fundamentals as well as in field case histories from all over the world. The focus will be on principles of soil geomorphology, soil stratigraphy, and soil chemistry and their applications in archaeological research.

Handbook of the Life Course

This book is a comprehensive analysis of the structure, determinants and consequences of changes in sub-Saharan African families, thereby representing an Afrocentric description of the emerging trends. It documents various themes in the sub-disciplines of family demography. The first section of the book focuses on philosophical understanding of African family, its theoretical perspectives, and comparative analysis of family in the 20th and 21st centuries. The second section covers family formation, union dissolution, emerging trend in single parenthood, and adolescents in the family. The following section describes types, determinants and consequences of African family changes: health, childbearing, youth development, teen pregnancy and family violence and the last chapter provides systematic evidence on existing laws and policies governing African family structure and dynamics. As such it illustrates the importance of family demography in African demographic discourse and will be an interesting read to scholars and students in the field of demography, social workers, policy makers, departments of Social Development in countries in Africa and relevant international agencies and all those interested in understanding the African family trajectory.

Soils in Archaeological Research

Drawing on key international reports and input from leading healthcare practitioners and educators worldwide, this ground-breaking book closely examines the real issues facing medicine and medical education. With a wide-ranging, evidence-based approach, the author identifies key drivers of change in both the developing and developed world. He examines

Family Demography and Post-2015 Development Agenda in Africa

This volume provides theoretical analysis of the economic and political conditions that allow corruption amongst the top political elite to survive. Case-studies and empirical analysis support the theoretical models used.

Transforming Medical Education for the 21st Century

Year on year, countries across the world continue to see an increase in life expectancy, largely attributed to the impact of modern medicine and disease eradication. There is now increasing evidence that environmental factors such as diet and lifestyle also have a significant role to play. However with this increase in years there often comes an unfortunate rise in chronic morbidity, with the quality of later life severely compromised by ill health. With age being the single greatest risk factor for a large proportion of common medical conditions, this latest report from the British Nutrition Foundation looks in detail at the role nutrition and physical activity can play in ensuring that the older adults of tomorrow can lead not only longer, but healthier lives. Written by a team of well known and respected experts Describes the role of diet and lifestyle in the ageing process of the major body organs and tissues including the brain, heart, gastrointestinal tract, musculoskeletal tissues, eyes, teeth and skin, as well as immune and endocrine systems Provides essential information for anyone involved in promoting health and quality of life for older people Each chapter includes a summary of the key points, as well as important recommendations to help identify long-term strategies for healthy ageing An overview of the main messages of the report are provided in a practical question and answer format suitable for lay readers Full of invaluable information on a subject which is set to increase in importance as the average age of populations rise worldwide, this book is crucial reading for students of nutrition, dietetics and food science, clinical nutritionists, public health nutritionists and policy makers. It will also provide an excellent reference for those working in the food industry and for nutritional supplement manufacturers and pharmaceutical companies.

Emerging Infectious Diseases

In this first analytical monograph on the subject, George Katrougalos and Gabriella Lazaridis examine the social welfare state of the main four Southern European countries, Spain, Italy, Portugal and Greece. They

conduct an overall system analysis of the welfare state in Southern Europe which challenges the prevalent Ferrera model. Additionally, they present a detailed outlook of policies adopted in the fields of employment, migration, health, social security, pensions and gender-family issues.

The Political Economy of Corruption

Within compulsory education, prevocational education is intended primarily to introduce participants to the world of work. This book considers curriculum design and pedagogical practice in pre-vocational education during the last two years of compulsory education. The study focuses on seven European countries (Scotland, Latvia, Poland, Hungary, Germany, Austria, Portugal) and presents an analysis of the curriculum as it relates both to knowledge-based competencies in economics and business and to self- and social competencies. It then discusses the differences between the prescribed and the enacted curriculum as identified by means of a subsequent survey of teachers. The authors conclude with a comparative assessment of each country case study, combined with supranational recommendations.

Extensional Tectonics Rifting and Continental Extension The extension of Earth's lithosphere occurs at divergent plate boundaries as well as in plate interiors. The geological, geochemical, and sedimentary processes of extension offer insights into topics ranging from the fundamentals of tectonics to the evolution of life. **Extensional Tectonics: Rifting and Continental Extension** reviews present-day knowledge of extensional tectonic processes and explores examples from around the world. Volume highlights include: Overview of extensional tectonic processes from continental rifting to oceanic basin formation In-depth examination of extension along rift systems and rift margins Review of post-collisional continental extension Examples from Africa, Asia, Europe, and the Americas Insights from observations, modeling, and 3D seismic data interpretation of extended terrains This book is one of a set of three in the collection **Tectonic Processes: A Global View**. The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity. Its publications disseminate scientific knowledge and provide resources for researchers, students, and professionals.

The Society Security disability program faces urgent challenges: more people receiving benefits than ever before, the prospect of even more claimants as baby boomers age, changing attitudes culminating in the Americans With Disabilities Act. Disability is now understood as a dynamic process, and Social Security must comprehend that process to plan adequately for the times ahead. **The Dynamics of Disability** provides expert analysis and recommendations in key areas: Understanding the current social, economic, and physical environmental factors in determining eligibility for disability benefits. Developing and implementing a monitoring system to measure and track trends in work disability. Improving the process for making decisions on disability claims. Building Social Security's capacity for conducting needed research. This book provides a wealth of detail on the workings of the Social Security disability program, recent and emerging disability trends, issues and previous experience in researching disability, and more. It will be of primary interest to federal policy makers, the Congress, and researchers—and it will be useful to state disability officials, medical and rehabilitation professionals, and the disability community.

Fit for Business

This volume provides a comprehensive guide to the manifestations and pathogenesis involved with stroke, including advancements in research and a newfound understanding of the biochemical background of this cerebrovascular disorder. This intensive handbook is meant to give clinicians a source reference that will enable them to gain a thorough knowledge and understanding of the clinical features and management of the many neurological manifestations of stroke disorder. In addition, practitioners, clinicians, and researchers

will gain a better understanding of highly studied topics, including amongst others, the medical complications associated with stroke, chapters on anterior circulation and hemorrhagic stroke syndromes, stroke related psychiatric disorders, and other rare causes of stroke disorder.

The Dynamics of Disability

Some foods, as well as contributing essential nutrients to the body, also contain additional components that improve disease resistance and general health status over and above that induced by ingestion of conventional foods. The so-called functional foods, and prebiotics and probiotics exemplify the relationship that exists between nutrition, the gut (the largest element of the body's immune system) and its flora, immunology and health. This important book contains chapters covering the basic principles of nutrition, gut microecology and immunology, as well as chapters which discuss the way in which this knowledge may be used to explain the positive and negative effects of food consumption, metabolism, probiotics and prebiotics. Food hypersensitivity and allergic reactions, carcinogenesis, and the role of nutrition in the reduced immunity of the aged are also discussed in detail. The editors of this exciting and informative book, who between them have a vast wealth of knowledge of the area, have drawn together and carefully edited international contributions from many well known and respected workers in the area. Gut Flora, Nutrition, Immunity and Health provides essential information for a range of professionals including nutritionists, dietitians, food scientists, microbiologists, gastroenterologists, immunologists and all personnel working in the development and use of functional foods and supplements, prebiotics and probiotics. Libraries in universities and research establishments where these subjects are studied and taught, and pharmaceutical and food companies should have multiple copies of this very useful book on their shelves. Roy Fuller is a consultant in gut microecology, based in Reading, UK; Gabriela Perdigón is based at the Centro de Referencia para Lactobacillus (CERELA) and at the Faculty of Biochemistry, Chemistry and Pharmacy of Tucuman University, Argentina.

"This book is unique because of the focus on longitudinal studies and international perspectives . . . There is no other book like it . . . This book will be useful both as an advanced undergraduate or graduate course text and as a resource for scholars.\" - Rosemary Blieszner, Virginia Polytechnic Institute and State University
\"A very strong volume . . . [T]his book will clearly be a ?must-have? for scholars interested in midlife.\" - Michael Marsiske, University of Florida
\"Midlife is no longer an ?uncharted territory? in human development. A group of outstanding researchers from different countries focuses on this peak period in the life span . . . Various views, including historical, cultural, and socio-structural perspectives, are adopted . . . [C]omprehensive reviews of studies on almost all relevant domains of human development . . . are given and provide a colorful picture of what midlife in these days may be all about.\" - Sigrun-Heide Filipp, University of Trier, Germany
Middle adulthood is a critical period of the life course. How we develop in middle age—the central period of our lives—can influence how well we cope in our later years. *Middle Adulthood: A Lifespan Perspective* explores these issues by bringing together a distinguished group of international contributors associated with a range of prestigious longitudinal studies. Key Features: Presents a much-needed longitudinal, lifespan perspective on middle age Provides a multicultural perspective to determine universal normative patterns of midlife development Addresses a broad scope of topics, including historical perspectives on the emergence of middle age as a normative developmental period in the life course, change and stability in personality, and cognitive development and decline *Middle Adulthood* is designed for scholars, researchers, and practitioners in the field of adult development and aging. It is an excellent text for advanced undergraduate and graduate students studying midlife development in the departments of Developmental Psychology, Human Development and Family Studies, Gerontology, Family Diversity, and

Health.

This authoritative handbook covers all aspects of immunosenescence, with contributions from experts in the research and clinical areas. It examines methods and models for studying immunosenescence; genetics; mechanisms including receptors and signal transduction; clinical relevance in disease states including infections, autoimmunity, cancer, metabolic syndrome, neurodegenerative diseases, frailty and osteoporosis; and much more.

Stroke, Part II: Clinical Manifestations and Pathogenesis

This book contains the refereed proceedings of the 5th Annual Global Innovation and Knowledge Academy, GIKA 2015, held in Valencia, Spain, in July 2015. The theme of the conference was “New Knowledge Impacts on Designing Implementable Innovative Realities.” The GIKA conference offers a unique opportunity for researchers, professionals, and students to present and exchange ideas concerning management, information systems, and business economics and see its implications in the real world. The 13 contributions accepted for GIKA 2015 were selected from 102 submissions and include research that contributes to the creation of a solid evidence base concerning new information and communication technologies for knowledge management, measuring the impact and diffusion of new technologies within organizations, and highlighting the role of new technologies and tools in the relationships between knowledge management and organizational innovation.

This volume contains the invited lectures, invited symposia, symposia, papers and posters presented at the 2nd European Cognitive Science Conference held in Greece in May 2007. The papers presented in this volume range from empirical psychological studies and computational models to philosophical arguments, meta-analyses and even to neuroscientific experimentation. The quality of the work shows that the Cognitive Science Society in Europe is an exciting and vibrant one. There are 210 contributions by cognitive scientists from 27 different countries, including USA, France, UK, Germany, Greece, Italy, Belgium, Japan, Spain, the Netherlands, and Australia. This book will be of interest to anyone concerned with current research in Cognitive Science.

Population Profile of the United States

This book provides the first comprehensive overview of a new scientific discipline termed Geroscience. Geroscience examines the molecular and cellular mechanisms that might explain why aging is the main risk factor for most chronic diseases affecting the elderly population. Over the past few decades, researchers have

made impressive progress in understanding the genetics, biology and physiology of aging. This book presents vital research that can help readers to better understand how aging is a critical malleable risk factor in most chronic diseases, which, in turn, could lead to interventions that can help increase a healthy lifespan, or 'healthspan.' The book begins with an analysis of the Geroscience hypothesis, as well as the epidemiological underpinnings that define aging as a candidate main risk factor for most chronic diseases. Next, each chapter focuses on one particular disease, or group of diseases, with an emphasis on how basic molecular and cellular biology might explain why aging is a major risk factor for it. Coverage in the book includes: cancer, cardiovascular disease, dementias, stroke, Parkinson's and Alzheimer's diseases, osteoporosis, arthritis, diabetes asthma, emphysema, kidney disease, vision impairment, and AIDS/HIV. It finishes with a chapter on pain in the elderly and an overview of future steps needed to bring the newly acquired knowledge into the clinic and the public at large.

Perspectives on Human Memory and Cognitive Aging

Every day young people engage in risky behaviors that affect not only their immediate well-being but their long-term health and safety. These well-honed essays apply diverse economic analyses to a wide range of unsafe activities, including teen drinking and driving, smoking, drug use, unprotected sex, and criminal activity. Economic principles are further applied to mental health and performance issues such as teenage depression, suicide, nutritional disorders, and high school dropout rates. Together, the essays yield notable findings: price and regulatory incentives are critical determinants of high-risk behavior, suggesting that youths do apply some sort of cost/benefit calculation when making decisions; the macroeconomic environment in which those decisions are made matters greatly; and youths who pursue high-risk behaviors are significantly more likely to engage in similar behaviors as adults. This important volume provides both a key data source for public policy makers and a clear affirmation of the usefulness of economic analysis to our understanding of risky behavior.
