With this publication, WIPO and the author aim at making available for judges, lawyers and law enforcement officials a valuable tool for the handling of intellectual property cases. To that effect, the case book uses carefully selected court decisions drawn from various countries with either civil or common law traditions. The extracts from the decisions and accompanying comments illustrate the different areas of intellectual property law, with an emphasis on matters that typically arise in connection with the enforcement of intellectual property rights in civil as well as criminal proceedings.

## **The Enforcement of Intellectual Property Rights: A Case Book**

Annotation Without claiming to be comprehensive, international attorney Shippey shares basic concepts and procedures for protecting the rights of a creator to a monopoly over the creation in the context of international commerce. ## **A Short Course in International Intellectual Property Rights**

The book examines the correlation between Intellectual Property Law – notably copyright – on the one hand and social and economic development on the other. The main focus of the initial overview is on historical, legal, economic and cultural aspects. Building on that, the work subsequently investigates how intellectual property systems have to be designed in order to foster social and economic growth in developing countries and puts forward theoretical and practical solutions that should be considered and implemented by policy makers, legal experts and the World Intellectual Property Organization (WIPO).

Interconnecting Smart Objects with IP: The Next Internet explains why the Internet Protocol (IP) has become the protocol of choice for smart object networks. IP has successfully demonstrated the ability to interconnect billions of digital systems on the global Internet and in private IP networks. Once smart objects can be easily interconnected, a whole new class of smart object systems can begin to evolve. The book discusses how IP-based smart object networks are being designed and deployed. The book is organized into three parts. Part 1 demonstrates why the IP architecture is well suited to smart object networks, in contrast to non-IP based sensor network or other proprietary systems that interconnect to IP networks (e.g. the public Internet of private IP networks) via hard-to-manage and expensive multi-protocol translation gateways that scale poorly. Part 2 examines protocols and algorithms, including smart objects and the low power link layers technologies used in these networks. Part 3 describes the following smart object network applications: smart grid, industrial automation, smart cities and urban networks, home automation, building automation, structural health monitoring, and container tracking. - Shows in detail how connecting smart objects impacts our lives with practical implementation examples and case studies - Provides an in depth understanding of the technological and architectural aspects underlying smart objects technology - Offers an in-depth examination of relevant IP protocols to build large scale smart object networks in support of a myriad of new services

This is a print on demand edition of a hard to find publication. Intellectual property (IP) plays a significant role in the U.S. economy. Enforcing IP laws involves many U.S. agencies, making coordination essential. Under the Prioritizing Resources and Organization for Intellectual Property Act of 2008 (PRO-IP Act), Congress required the U.S. Attorney General, through the Department of Justice (DoJ), to devote additional resources and undertake other specific IP efforts. The PRO-IP Act also created the position of the Intellectual Property Enforcement Coordinator (IPEC) to enhance interagency coordination. This report addresses DoJ and IPEC's efforts to implement the act. It also compares the 2010 Joint Strategic Plan on Intellectual

Property Enforcement to the content called for in the PRO-IP Act. Illus.

*European Intellectual Property Law* offers a full account of the main areas of substantive European IP law and a discussion of their wider context and effect. The amount and reach of European law, and decision-making in the field of intellectual property has grown exponentially since the 1960's, making it increasingly difficult to treat European law as an adjunct to domestic intellectual property regimes. *European Intellectual Property Law* responds to this reality by presenting a clear and detailed account of each of the main areas of substantive EU intellectual property law, situated in the context of both the EU legal system and international IP law, including EU constitutional law, the law of the European Patent Convention 1973/2000, and private international law. It draws selectively on examples from domestic IP regimes to illustrate substantive differences between those regimes and to demonstrate the impact of European law, and decision-making on EU Member States. This unique, thoroughly modern approach goes beyond a discussion of the provisions of European legal instruments to consider their wider context and effect. *European Intellectual Property Law* is the ideal guide for any student wishing to gain a full and critical understanding of the substantive European law of intellectual property.

In a sophisticated defense of intellectual property, Merges draws on Kant, Locke, and Rawls to explain how IP rights are based on a solid ethical foundation and make sense for a just society. He also calls for appropriate boundaries: IP rights are real, but they come with real limits.

## **Justifying Intellectual Property**

This book discusses the main legal and economic challenges to the creation and enforcement of security rights in intellectual property and explores possible avenues of reform, such as more specific rules for security in IP rights and better coordination between intellectual property law and secured transactions law. In the context of business financing, intellectual property rights are still only reluctantly used as collateral, and on a small scale. If they are used at all, it is mostly done in the form of a floating charge or some other “all-asset” security right. The only sector in which security rights in intellectual property play a major role, at least in some jurisdictions, is the financing of movies. On the other hand, it is virtually undisputed that security rights in intellectual property could be economically valuable, or even crucial, for small and medium-sized enterprises – especially for start-ups, which are often very innovative and creative, but have limited access to corporate financing and must rely on capital markets (securitization, capital market). Therefore, they need to secure bank loans, yet lack their own traditional collateral, such as land.

Identifying the optimal price for a transaction involving an intellectual property (IP) asset necessarily involves a thorough, well-reasoned, and well-supported IP valuation analysis. This matchless book draws on decades of experience from the world’s most renowned IP valuation experts, patent office chief economists, finance and accounting professors, and top-tier legal professionals to provide clear guidance and immediately actionable knowledge on how to value IP assets in a multitude of scenarios. The contributors explore all major facets of IP valuation, ranging from the basics of value to technical economic methods in an approachable manner. The book examines the valuation of brands, copyright, trade secrets, patents, and other forms of IP from a multidisciplinary viewpoint with worked examples, draft contract language, case law analysis, and up-to-date theoretical considerations. Issues and topics considered in depth include the following: fair, reasonable, and non-discriminatory terms; determining reasonable royalty rates; standard essential patents; profit apportionment; discount rates; role of the IP asset manager and multi-functional teams; IP management in collaborative research and development; financial methods and economic considerations; and operationalization of IP valuation in practice. The handbook is the result of five years of dedication and hard work by the advisors and a growing network of researchers, supporters, and end-users involved in the Asia-Pacific Research and Training Network on Trade. As IP becomes ever more indispensable in so many activities and industries that cross national borders, the need to overcome the lack of shared understanding of how to approach the valuation of IP becomes more urgent. This book will facilitate consistent approaches to the valuation of IP as an indispensable component of trade, investment, and sustainable economic development. It will provide IP asset managers and transactional attorneys, both seasoned experts and newcomers, with up-to-date methods on how to value IP assets and apply them in practice.

This book is highly topical. The shift from the multilateral WTO negotiations to bilateral and regional Free Trade Agreements has been going on for some time, but it is bound to accelerate after the WTO Doha round of negotiations is now widely regarded as a failure. However, there is a particular regional angle to this topic as well. After concluding that further progress in the Doha round was unlikely, Pacific Rim nations recently have progressed with the negotiations of a greatly expanded Trans-Pacific Partnership Agreement that includes industrialised economies and developed countries such as the United States, Japan, Australia and New Zealand, recently emerged economies such as Singapore, but also several developing countries in Asia and Latin America such as Malaysia and Vietnam. US and EU led efforts to conclude FTAs with Asia-Pacific nations are also bound to accelerate again, after a temporary slowdown in the negotiations following

the change of government in the United States and the expiry of the US President's fast-track negotiation authority. The book will provide an assessment of these dynamics in the world's fastest growing region. It will look at the IP chapters from a legal perspective, but also put the developments into a socio-economic and political context. Many agreements in fact are concluded because of this context rather than for purely economic reasons or to achieve progress in fields like IP law. The structure of the book follows an outline that groups countries into interest alliances according to their respective IP priorities. This ranges from the driving forces of the EU, US and Japan, via Asia-Pacific resource-rich but IP poor economies such as Australia and New Zealand, recently emerged economies with strong IP systems such as Singapore and Korea to leading developing countries such as China and India and 'second tier industrializing economies' such as Thailand, Malaysia and Indonesia.
