In 1938 Canada's navy comprised a handful of ships and barely 1000 personnel with no ship-building industry to speak of. By 1945, Canada's Navy included 775 vessels and 90,000 personnel. Historians consider the growth and participation of the Royal Canadian Navy in the Battle of the Atlantic and other campaigns as nothing short of remarkable. Little is known of the comparable growth in the shipbuilding industry and its provision of ships of many types to not only the Canadian Navy but the Royal Navy and the United States Navy as well. David Shirlaw's book is an effort to address that shortfall in the nation's history.

This book presents an introduction to biohydrogen production and the recent advances and developments of the cleanest biofuel produced from bioresources. Biohydrogen has the highest energy content relative to weight and burns cleanly – generating just water. It is the best choice for fuel cells, where it generates electricity directly, in its reaction with oxygen. Biohydrogen occurs naturally as part of digestive gases from mammals and can be produced in specially designed anaerobic biodigesters, or through photocatalysis with microalgae. The gas is also easy to purify and use. The economic production of biohydrogen is still full of challenges: From the efficient and rapid conversion of the substrate to storage, transportation, and safe use, there are several aspects that need to be developed. Research in this field is addressing the issue of efficient large-scale production from several directions: Substrate pretreatment to enhance digestibility, metabolic

networks analysis, microbial diversity and succession to highlight constraints in production, bioreactor, and downstream design to improve throughput and reduce costs, to name a few. The ideas and technologies presented in this book contribute to achieving the UN Sustainable Development Goal 7: Affordable and Clean Energy. The book is written for researchers and students interested in biorefinery and biofuel technologies.

It includes a name list of medicinal plants from which the chemical component was isolated. Furthermore, abundant pharmacological data for nearly 8,000 chemical components are presented, including experimental method, experimental animal, cell type, quantitative data, as well as control compound data. The seven indexes allow for complete cross-indexing. Regardless whether one searches for the molecular formula of a compound, the pharmacological activity of a compound, or the English name of a plant, the information in the book can be retrieved in multiple ways.

## **Technical Manual**

The development of powerful new techniques and refinements of techniques in molecular genetics in recent years, and the surge in interest in biotechnology based on genetic methods, have heralded a new golden age in molecular genetics, and stimulated in diverse disciplines much interest in the technologies themselves and their potential uses in basic and applied biomedical sciences. Although some excellent specialist laboratory manuals (especially the Cold Spring Harbor Laboratory manuals by I. H. Miller; R. W. Davies et al. ; and T. Maniatis et al. ) on certain chapters of molecular genetics exist, no general text that covers a broad spectrum of the subject has thus far been published. The purpose of this manual is to present most, though of necessity not all of the important methods of molecular genetics, in a series of simple experiments, many of which can be readily accomplished by the microbiologist, biochemist or biotechnologist that has had only limited exposure to genetics. The remainder of the experiments require either greater familiarity with the subject, or guidance by someone with such experience. The book should, therefore, not only enable individuals to acquire new procedures for ongoing projects, but also serve as a basis for the teaching of molecular genetic techniques in formal predoctoral and postdoctoral laboratory courses.

Symptomatology and Therapy of Toxicological Emergencies is a handbook on toxicological emergencies that includes much new material and discusses many new substances which have become available since the second edition, entitled "\"Signs, Symptoms, and Treatment of Certain Acute Intoxications,\"\" was published in 1958. When compared with the second edition, this volume covers a considerably larger number of drugs and chemicals, presents urgently needed information on poisonous plants, lists the compounds implicated in blood dyscrasias, and includes accepted threshold limit values for chemicals, the maximum permissible concentrations of various chemicals in food, drugs, and cosmetics, as well as tables on the acute toxicity of numerous chemicals. This handbook will be helpful to teachers of chemistry, biochemistry, pharmacology, toxicology, radiation medicine, etc., who instruct students or supervise the work of technicians. It will be of particular value to those industries and operations which have an active industrial hygiene program. Finally, but most important, this volume was written for the physician who needs toxicological information on a drug or a chemical, who may need a reference book which will quickly review for him the major side effects he may expect in a patient, or who requires additional information for the treatment of an intoxication.

Medicinal Plant Research in Africa, second edition is an updated and complete reference on the pharmacology of most relevant African species and their phytochemical properties. Although pharmacopoeias of most African countries are available and contain an impressive number of medicinal plants used for various therapeutic purposes, however there was no global standard book on the nature and specificity of chemicals isolated in African medicinal plants. This book has set the standard when it first published in 2013 and now is updated with novel phytochemicals belonging to diverse classes of terpenoids, phenolics, and alkaloids. The first chapter cover monoterpenes and related phytochemicals and is followed by sesquiterpenes on chapter two. Chapter tri reviews diterpenoids and chapter four provides an overview of

triterpenes and steroids. Essential oils, simple phenols, phenolic acids and related esters come next in chapters five and six, respectively. The following chapters cover coumarins, flavonoids, quinones, xanthenes, lignans and stilbenes. Tannins, alkaloids, and ceramides. Chapters 15 to 20 focus on specific health conditions starting with antibiotic infection, antimalarial and other antiprotozoal diseases, cytotoxic and anticancer activity, anti-inflammatory and analgesic action, antidiabetic botanicals and the applications of African plant phytochemicals on reproductive, cardiovascular, and central nervous systems conditions. The final chapter covers the market and industry updates since the first edition published. \"Medicinal Plant Research in Africa, 2 Ed.\" provides a complete overview of the main phytochemical principles present in the African flora and their pharmaceutical use. Pharmaceutical scientists, Ethnopharmacists, botanists, and medicinal chemists will benefit from the content organization and the inclusion of the most recent methods for structural identification of phytochemicals, pharmacological techniques, and data interpretation. - Covers novel chemical structures, and new pharmacological data - Highlights how phytochemicals can help overcome drug resistance - Provides updated methods for structural identification of phytochemicals, pharmacological techniques, and data interpretation

### **Emergency & Critical Care Pocket Guide**

An increasing number of novel psychoactive drugs are currently available and sold as 'legal highs' or 'research chemicals'. These New Psychoactive Substances (NPS) constitute a broad range of hundreds of natural and synthetic drugs, including synthetic cannabinoids, synthetic cathinones, synthetic opioids and other classes, which use has resulted in a significantly growing number of intoxication and mortality, as reported by emergency and poison centres from all over the world. Definition of “NPS” includes any substance that has recently become available and has been designed purposely to replace illegal drugs, although not necessarily of new synthesis. Use of NPS is dramatically increased in the last decade and represents a serious risk for the public health. Their ever-evolving chemical structure, the possibility to distribute in real time through the Internet and social networks information about their use and effects have dramatically challenged public health and drug policies internationally. NPS recently attracted great attention, but most are still unregulated and proposed online as legal alternatives to traditional illicit drugs. Unfortunately, this area is still poorly investigated and very limited information are available so far on their nature and potential risks. The phenomenon of NPS requires multi-national and multi-disciplinary collaborations to improve our knowledge on this changing drug market, to share information and define good practices at a global level. Political and educational efforts are indispensable to regulate this mutable scenario and to inform the public about health consequences of NPS use. Clinicians and emergency staff should be aware that NPS may cause severe health consequences and unexpected adverse effects, and be informed on how to recognize and treat specific intoxication cases. Considering the widespread use of NPS and paucity of information about their toxicology and pharmacology, this Research Topic will be useful to understand the new trends in the scenario of drug use, abuse and addiction to inform professionals and general public about the health problems caused by NPS and to help drug-control policies to adopt suitable control measures.
