The Amazing True Story of How Babies Are Made

Why cracking the code of human conception took centuries of wild theories, misogynist blunders, and ludicrous mistakes Throughout most of human history, babies were surprises. People knew the basics: men and women had sex, and sometimes babies followed. But beyond that the origins of life were a colossal mystery. *The Seeds of Life* is the remarkable and rollicking story of how a series of blundering geniuses and brilliant amateurs struggled for two centuries to discover where, exactly, babies come from. Taking a page from investigative thrillers, acclaimed science writer Edward Dolnick looks to these early scientists as if they were detectives hot on the trail of a bedeviling and urgent mystery. These strange searchers included an Italian surgeon using shark teeth to prove that female reproductive organs were not 'failed' male genitalia, and a Catholic priest who designed ingenious miniature pants to prove that frogs required semen to fertilize their eggs. A witty and rousing history of science, *The Seeds of Life* presents our greatest scientists struggling-against their perceptions, their religious beliefs, and their deep-seated prejudices-to uncover how and where we come from.

What's in There?

Children are the foundation of the United States, and supporting them is a key component of building a successful future. However, millions of children face health inequities that compromise their development, well-being, and long-term outcomes, despite substantial scientific evidence about how those adversities contribute to poor health. Advancements in neurobiological and socio-behavioral science show that critical biological systems develop in the prenatal through early childhood periods, and neurobiological development is extremely responsive to environmental influences during these stages. Consequently, social, economic, cultural, and environmental factors significantly affect a child's health ecosystem and ability to thrive throughout adulthood. *Vibrant and Healthy Kids: Aligning Science, Practice, and Policy to Advance Health Equity* builds upon and updates research from *Communities in Action: Pathways to Health Equity* (2017) and *From Neurons to Neighborhoods: The Science of Early Childhood Development* (2000). This report provides a brief overview of stressors that affect childhood development and health, a framework for applying current

brain and development science to the real world, a roadmap for implementing tailored interventions, and recommendations about improving systems to better align with our understanding of the significant impact of health equity.

As Gaeilge An File ar Buile the Mad Poet. Why so? Is writing poetry a form of madness? Or is it therapeutic? Are the ideas in them mad? Or do people just think so? Is it mad to write in Irish Gaelic? Or to translate it? Is it mad to be a Catholic Christian in the 21st century? Or does that question make you mad? Is the poet furious at the insanity in the world? Or is he just contributing his piece to it? Is the poet mad, eccentric, or maybe just a little bit off? Its up to the reader to answer these questions. The poet is content that you think about them. There is a lot to ponder in this book. And theres just plain fun, too! These 75 Irish language poems, and their English translations, cover a wide range of subjects, from silly parodies to everyday events to historical narrative. They are about personal experiences, and long distant times. They take another, different look at history, and the world we live in. They speak of America, Ireland, Europe, Russia and even Antarctica! Some are about very ordinary things, and some are about world shaking events. They sometimes are about the things youre not supposed to talk about because we really need to. Modern in outlook and language, they celebrate traditional values, Irish and American. They celebrate heroes, lament tragedy, and laugh at absurdity. They speak clearly, and they look deeply when they are not just fooling around! There are 30 photographs inside this book, which often are of places mentioned in the poems. Others just capture the spirit of the poems. All of them were taken by the author. As an extra bonus, the story of the Gerry Tobin Irish Language School is included in this book! Except for one poem (For the New Year), which was written for the millennium (2000), these poems were all written between September 2001 and September 2003. A number of them are about the terrible events of September 11th, 2001, and their aftermath. Writing them was a way for me to try to comprehend. All of them are attempts at comprehending the world, at verbalizing those hard to get at emotions and movements of the human spirit, at remembering the important things. They connect with the past, cope with the present, and hope in the future. The Mad Poet you never know what hes going to say An File ar Buile. Cad ina thaobh? The Truths of Love

Born with the destiny of becoming a Mayan sacred midwife, Chona Pérez has carried on centuries-old traditional Indigenous American birth and healing practices over her 85 years. At the same time, Chona developed new approaches to the care of pregnancy, newborns, and mothers based on her own experience and ideas. In this way, Chona has contributed to both the cultural continuities and cultural changes of her town over the decades. In *Developing Destinies*, Barbara Rogoff illuminates how individuals worldwide build on cultural heritage from prior generations and at the same time create new ways of living. Throughout Chona's lifetime, her Guatemalan town has continued to use longstanding Mayan cultural practices, such as including children in a range of community activities and encouraging them to learn by observing and contributing. But the town has also transformed dramatically since the days of Chona's own childhood. For instance, although Chona's upbringing included no formal schooling, some of her grandchildren have gone on to attend university and earn scholarly degrees. The lives of Chona and her town provide extraordinary examples of how cultural practices are preserved even as they are adapted and modified. *Developing Destinies* is an engaging narrative of one remarkable person's life and the life of her community that blends psychology, anthropology, and history to reveal the integral role that culture plays in human development. With extensive photographs and accounts of Mayan family life, medical practices, birth, child development, and learning, Rogoff adeptly shows that we can better understand the role of culture in our lives by examining how people participate in cultural practices. This landmark book brings theory alive with fascinating ethnographic findings that advance our understanding of childhood, culture, and change.
