

3 Of What Is Composed Of Cocoa Butter

Science and Technology of Enrobed and Filled Chocolate, Confectionery and Bakery Products

Enrobed and filled confectionery and bakery products, such as praline-style chocolates, confectionery bars and chocolate-coated biscuits and ice-creams, are popular with consumers. The coating and filling can negatively affect product quality and shelf-life, but with the correct product design and manufacturing technology, the characteristics of the end-product can be much improved. This book provides a comprehensive overview of quality issues affecting enrobed and filled products and strategies to enhance product quality. Part one reviews the formulation of coatings and fillings, with chapters on key topics such as chocolate manufacture, confectionery fats, compound coatings and fat and sugar-based fillings. Product design issues, such as oil, moisture and ethanol migration and chocolate and filling rheology are the focus of Part two. Shelf-life prediction and testing are also discussed. Part three then covers the latest ingredient preparation and manufacturing technology for optimum product quality. Chapters examine tempering, enrobing, chocolate panning, production of chocolate shells and deposition technology. With its experienced team of authors, Science and technology of enrobed and filled chocolate, confectionery and bakery products is an essential purchase for professionals in the chocolate, confectionery and bakery industries. - Provides a comprehensive review of quality issues affecting enrobed and filled products - Reviews the formulation of coatings and fillings, addressing confectionery fats, compound coatings and sugar based fillings - Focuses on product design issues such as oil, moisture and chocolate filling rheology

Official Gazette of the United States Patent Office

Epidemiological studies have continued to increase awareness of how trans fats impact human nutrition and health. Because of the adverse effects, trans fats labeling regulations were introduced in 2006. Since then, the fats and oils industry and food product manufacturers have researched and implemented a number of novel, practical, and cost-effective solutions for replacing trans fats with alternate products. This book provides a comprehensive understanding of the trans fats chemistry, labeling regulations, and trans fat replacement technologies. It also deals with world-wide trends and scenarios in terms of regulations and trans fat replacement solutions. - Includes details on how trans fats became a part of our food chain, why they remain a health issue, and what replacement solutions exist - Offers in-depth analysis of the structure, properties, and functionality of fats and oils - Describes trans fats regulations and scenarios in different geographies around the world

Foods: Their Composition and Analysis

Since the publication of the first edition of Industrial Chocolate Manufacture and Use in 1988, it has become the leading technical book for the industry. From the beginning it was recognised that the complexity of the chocolate industry means that no single person can be an expert in every aspect of it. For example, the academic view of a process such as crystallisation can be very different from that of a tempering machine operator, so some topics have more than one chapter to take this into account. It is also known that the biggest selling chocolate, in say the USA, tastes very different from that in the UK, so the authors in the book were chosen from a wide variety of countries making the book truly international. Each new edition is a mixture of updates, rewrites and new topics. In this book the new subjects include artisan or craft scale production, compound chocolates and sensory. This book is an essential purchase for all those involved in the manufacture, use and sale of chocolate containing products, especially for confectionery and chocolate scientists, engineers and technologists working both in industry and academia. The new edition also boasts

two new co-editors, Mark Fowler and Greg Ziegler, both of whom have contributed chapters to previous editions of the book. Mark Fowler has had a long career at Nestle UK, working in Cocoa and Chocolate research and development – he is retiring in 2013. Greg Ziegler is a professor in the food science department at Penn State University in the USA.

Trans Fats Replacement Solutions

Covers the history, ingredients, and processing techniques used in the manufacture of chocolate.

Beckett's Industrial Chocolate Manufacture and Use

This text addresses critical topics in the expanding market and production for lipids. It combines novel and traditional methods from technological and biological perspectives to achieve the most effective pathways for production of modified lipids. The book is organized into three sections exploring development, new production methods and successful products and uses.

Pacific Pharmacist

The issues for 1857-1911 include Report on the progress of pharmacy. The last volume (1911) contains only Report on the progress of pharmacy, the constitution, by-laws and roll of members.

The Science of Chocolate

This book provides an overview of the science and technology of chocolate manufacture from cocoa production, through the manufacturing processes, to the sensory, nutrition and health aspects of chocolate consumption. It covers cocoa cultivation and production with special attention paid to cocoa bean composition, genotypic variations in the bean, post-harvest pre-treatments, fermentation and drying processes, and the biochemical basis of these operations. The scientific principles behind industrial chocolate manufacture are outlined with detailed explanations of the various stages of chocolate manufacturing including mixing, refining, conching and tempering. Other topics covered include the chemistry of flavour formation and development during cocoa processing and chocolate manufacture; volatile flavour compounds and their characteristics and identification; sensory descriptions and character; and flavour release and perception in chocolate. The nutritional and health benefits of cocoa and chocolate consumption are also addressed. There is a focus throughout on those factors that influence the flavour and quality characteristics of the finished chocolate and that provide scope for process optimization and improvement. The book is designed to be a desk reference for all those engaged in the business of making and using chocolate worldwide; confectionery and chocolate scientists in industry and academia; students and practising food scientists and technologists; nutritionists and other health professionals; and libraries of institutions where food science is studied and researched. an overview of the science behind chocolate manufacture covers the whole process from cocoa production, through manufacturing, to the nutrition and health aspects of chocolate consumption focuses on factors that influence chocolate flavour and quality, and that provide scope for process optimization and improvement.

Structured and Modified Lipids

Trans fatty acids (TFAs) have been used for many years to impart desirable physical characteristics to fats and fat blends used in food manufacturing. However, clinical trials and epidemiological studies conducted over the last thirty years have shown that TFAs can increase “bad” cholesterol levels in the blood while reducing “good” cholesterol. Accordingly, they are also linked with increased risks of coronary heart disease, thrombosis and strokes. For this reason, the food industry has been obliged to find alternatives to TFAs, thus enabling it to meet the presumed consumer demand for “low” or “no” trans fats products. The issue is

becoming more and more pressing. For example, US labelling regulations now require that food manufacturers state the trans fat content of their products on the packaging. This book provides an overview of trans fatty acids in oils and fats used in food manufacture. Topics covered include: the chemistry and occurrence of TFAs; analytical methods for determining the fatty acid composition including TFAs of foods; processing techniques for reducing, minimising or even avoiding the formation of TFAs; TFA alternatives in food; health and nutrition concerns and legislative aspects. It is directed at chemists and technologists working in edible oils and fats processing and product development; food scientists and technologists; analytical chemists and nutritionists working in the food industry.

Proceedings of the American Pharmaceutical Association at the Annual Meeting

Dairy Science, Four Volume Set includes the study of milk and milk-derived food products, examining the biological, chemical, physical, and microbiological aspects of milk itself as well as the technological (processing) aspects of the transformation of milk into its various consumer products, including beverages, fermented products, concentrated and dried products, butter and ice cream. This new edition includes information on the possible impact of genetic modification of dairy animals, safety concerns of raw milk and raw milk products, peptides in milk, dairy-based allergies, packaging and shelf-life and other topics of importance and interest to those in dairy research and industry. Fully reviewed, revised and updated with the latest developments in Dairy Science Full color inserts in each volume illustrate key concepts Extended index for easily locating information

Chocolate Science and Technology

Biotechnologie und Gentechnik gehören zu den Schlüsseltechnologien des 21. Jahrhunderts. Sie erlauben uns Schritt für Schritt, wissenschaftlich-technische Erkenntnisse von Zellbiologie und Genetik, von Biochemie und Mikrobiologie, von Bioverfahrenstechnik und Bioinformatik auf die Gesundheitsvorsorge und die Heilung von Krankheiten, die landwirtschaftliche Produktion und die Herstellung von Nahrungsmitteln, den Technologiewandel bei der Herstellung von Chemie-Produkten und auf den Umweltschutz anzuwenden. Wie viele Technologien sind sie aber auch nicht davor sicher, mißbraucht zu werden. Davor kann eine sachliche und breite Information über Chancen und Risiken am besten schützen. Dieser Taschenatlas wendet sich deshalb nicht nur an Studenten der Natur- und Ingenieurwissenschaften und der Medizin, sondern auch an alle, die einen Überblick über die Produkte, die Methoden, die aktuellen Anwendungen und die ethischen, wirtschaftlichen und sicherheitstechnischen Rahmenbedingungen der Bio- und Gentechnologie suchen.

Trans Fatty Acids

Comprehensive Foodomics, Three Volume Set offers a definitive collection of over 150 articles that provide researchers with innovative answers to crucial questions relating to food quality, safety and its vital and complex links to our health. Topics covered include transcriptomics, proteomics, metabolomics, genomics, green foodomics, epigenetics and noncoding RNA, food safety, food bioactivity and health, food quality and traceability, data treatment and systems biology. Logically structured into 10 focused sections, each article is authored by world leading scientists who cover the whole breadth of Omics and related technologies, including the latest advances and applications. By bringing all this information together in an easily navigable reference, food scientists and nutritionists in both academia and industry will find it the perfect, modern day compendium for frequent reference. List of sections and Section Editors: Genomics - Olivia McAuliffe, Dept of Food Biosciences, Moorepark, Fermoy, Co. Cork, Ireland Epigenetics & Noncoding RNA - Juan Cui, Department of Computer Science & Engineering, University of Nebraska-Lincoln, Lincoln, NE Transcriptomics - Robert Henry, Queensland Alliance for Agriculture and Food Innovation, The University of Queensland, St Lucia, Australia Proteomics - Jens Brockmeyer, Institute of Biochemistry and Technical Biochemistry, University Stuttgart, Germany Metabolomics - Philippe Schmitt-Kopplin, Research Unit Analytical BioGeoChemistry, Neuherberg, Germany Omics data treatment, System Biology and Foodomics - Carlos Leon Canseco, Visiting Professor, Biomedical Engineering, Universidad Carlos III de

Madrid Green Foodomics - Elena Ibanez, Foodomics Lab, CIAL, CSIC, Madrid, Spain Food safety and Foodomics - Djuro Josic, Professor Medicine (Research) Warren Alpert Medical School, Brown University, Providence, RI, USA & Sandra Kraljevic Pavelic, University of Rijeka, Department of Biotechnology, Rijeka, Croatia Food Quality, Traceability and Foodomics - Daniel Cozzolino, Centre for Nutrition and Food Sciences, The University of Queensland, Queensland, Australia Food Bioactivity, Health and Foodomics - Miguel Herrero, Department of Bioactivity and Food Analysis, Foodomics Lab, CIAL, CSIC, Madrid, Spain Brings all relevant foodomics information together in one place, offering readers a 'one-stop,' comprehensive resource for access to a wealth of information Includes articles written by academics and practitioners from various fields and regions Provides an ideal resource for students, researchers and professionals who need to find relevant information quickly and easily Includes content from high quality authors from across the globe

Encyclopedia of Dairy Sciences

Report of the British Nutrition Foundation's Task Force Chairman of the Task Force: Professor Malcolm Jackson, University of Liverpool Plants: Diet and Health is an extremely timely publication comprising the comprehensive and authoritative independent report of the British Nutrition Foundation's Task Force concentrating on bioactive substances and antioxidant nutrients in plant foods. The book focuses on the present state of knowledge and the effect on good health through the intake of these substances in an appropriate diet, looking in detail at any possible protection afforded the body by these substances - against chronic disorders, particularly cancer and cardiovascular disease. This landmark publication includes chapters covering the classification, mechanisms of action and bioavailability of bioactive substances in plants, as well as in-depth coverage of the major plant foods: fruit, vegetables, cereals, nuts and pulses. Important chapters also cover the influence of the gut microflora, the effect of agronomy, storage, preservation, processing and cooking on bioactive substances, and the public health nutrition implications of all the issues raised. The final sections of the book cover the conclusions of the Task Force and the important recommendations made, which should be considered by all those involved in this area. There is also a questions and answers chapter covering topical media issues. Plants: Diet and Health provides essential core information for a wide range of health professionals, including dietitians, nutritionists, general and family practitioners and community nurses (e.g. school nurses, practice nurses and health visitors). Personnel in the food industry responsible for product development, production and packaging will find this landmark publication to be an extremely valuable reference, as will all those involved in the production of dietary supplements in the food and pharmaceutical industries. Lecturers, undergraduates, postgraduates and postdoctoral researchers in nutrition, dietetics, plant sciences, biochemistry, food science and food technology, public health, pharmacy, pharmacology and medicine will also find this book to be of great value in their work.

Biotechnology

Vols. for 1904-1926 include also decisions of the United States Board of General Appraisers.

Comprehensive Foodomics

An authoritative reference that contains the most up-to-date information knowledge, approaches, and applications of lipid crystals Crystallization of Lipids is a comprehensive resource that offers the most current and emerging knowledge, techniques and applications of lipid crystals. With contributions from noted experts in the field, the text covers the basic research of polymorphic structures, molecular interactions, nucleation and crystal growth and crystal network formation of lipid crystals which comprise main functional materials employed in food, cosmetic and pharmaceutical industry. The authors highlight trans-fat alternative and saturated-fat reduction technology to lipid crystallization. These two issues are the most significant challenges in the edible-application technology of lipids, and a key solution is lipid crystallization. The text focuses on the crystallization processes of lipids under various external influences of thermal fluctuation, ultrasound irradiation, shear, emulsification and additives. Designed to be practical, the book's information

can be applied to realistic applications of lipids to foods, cosmetic and pharmaceuticals. This authoritative and up-to-date guide: Highlights cutting-edge research tools designed to help analyse lipid crystallization with the most current and the conventional techniques Offers a thorough review of the information, techniques and applications of lipid crystals Includes contributions from noted experts in the field of lipid crystals Presents cutting-edge information on the topics of trans-fat alternative and saturated-fat reduction technology Written for research and development technologists as well as academics, this important resource contains research on lipid crystals which comprise the main functional materials employed in food, cosmetic and pharmaceutical industry.

Plants

Fermented foods play a major role in human nutrition and health, given the addition of flavor, improvement of texture, preservation against spoilage, and ease of digestion due to the fermentation process. This book provides information about the chemistry and bioactive compounds of African fermented food products, including their nutritional value and minor constituents. Chapters cover a wide range of topics, from the microorganisms involved in spontaneous fermentation to food safety considerations and quality assessment. The text can be used as a practical manual to better understand the nutritional and medicinal uses of various African fermented foods, as well as prepare recipes and product labels.

Chemical Abstracts

Vols. for 1891-1897 include decisions of the United States Board of General Appraisers.

The International Formulary ...

Protein engineering has proved to be one of the more fruitful technological approaches in biotechnology, being both very powerful and able to generate valuable intellectual property. This book aims to present examples in which the application of protein engineering has successfully solved problems arising in industrial biotechnology. There is a section on its use to enhance purification of recombinant proteins. The use of protein engineering to modify the activity or the stability of industrial enzymes from lipases to proteases, from carboxypeptidases to glucanases and glucosidases, and from pectin modifying enzymes to enzymes able to degrade recalcitrant compounds is extensively covered. It is shown how areas as diverse as agrofood technology, fine chemistry, detergents, bioremediation and biosensors receive significant contributions from protein and solvent engineering. The application of protein engineering to health care is also covered, from the development of new vaccines to new potential therapeutic proteins. A specific notation is given to protein engineering in the development of target molecules for drug discovery. International in scope, the many contributions are drawn from academia and industry. The text should be of interest to students and researchers in industrial biotechnology as well as to everybody interested in basic research in protein structure, molecular genetics, bio-organic chemistry, biochemistry, agrobiotechnology, pharmaceutical sciences and medicine.

Industrial Chocolate Manufacture and Use

A highly nutritious crop, cocoa constitutes a significant source of income for small-scale producers. Attractively presented, with full-colour illustrations, tables and step-by-step guides, the text clearly sets out the procedure to start growing cocoa. In addition to recommending a technical schedule for the production of cocoa plants, the guide stresses the importance of phytosanitary protection and post-harvest operations. Useful advice and economic information on the sector is also given in later chapters.

Treasury Decisions Under Customs and Other Laws

Since the publication of the first edition of *Industrial Chocolate Manufacture and Use* in 1988, it has become the leading technical book for the industry. From the beginning it was recognised that the complexity of the chocolate industry means that no single person can be an expert in every aspect of it. For example, the academic view of a process such as crystallisation can be very different from that of a tempering machine operator, so some topics have more than one chapter to take this into account. It is also known that the biggest selling chocolate, in say the USA, tastes very different from that in the UK, so the authors in the book were chosen from a wide variety of countries making the book truly international. Each new edition is a mixture of updates, rewrites and new topics. In this book the new subjects include artisan or craft scale production, compound chocolates and sensory. This book is an essential purchase for all those involved in the manufacture, use and sale of chocolate containing products, especially for confectionery and chocolate scientists, engineers and technologists working both in industry and academia. The new edition also boasts two new co-editors, Mark Fowler and Greg Ziegler, both of whom have contributed chapters to previous editions of the book. Mark Fowler has had a long career at Nestle UK, working in Cocoa and Chocolate research and development – he is retiring in 2013. Greg Ziegler is a professor in the food science department at Penn State University in the USA.

Crystallization of Lipids

Eat fewer processed foods with these delicious nutritionist-approved recipes Much-loved online recipe writer and registered nutritionist Delicia Bale (@NutritiouslyDelicia) makes reducing the number of ultra-processed foods (UPFs) you eat simple with these 75 easy recipes. From Maple Cinnamon Granola and Meal Prep Noodle Jars to Katsu Chicken Curry, Roasted Mediterranean Vegetable Lasagne and Peanut Butter Swirl Brownies – these convenient UPF-free breakfasts, lunches, dinners and snacks will help you eat healthier, while keeping you energised and satisfied all day long. These are spins on your classic family favourites with the same delicious flavours but fewer industrially processed ingredients.
