Standard Method for Sieve Analysis of Fine and Coarse Aggregates (ASTM C136) - Standard Method for Sieve Analysis of Fine and Coarse Aggregates (ASTM C136) 5 minutes, 51 seconds - Standard Test Method **for Sieve**, Analysis of Fine and Coarse Aggregates Today we're going to demonstrate the dry **sieving**, test ...

The Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates is used primarily to (1) determine the grading of materials proposed for use as aggregates or being used as aggregates, and to (2) determine the compliance of the particle size distribution where applicable specifications are required, and to

(3) provide necessary data for quality control of the production of various aggregate products and mixtures containing aggregates.

Devices required for this test method are: a balance or scale used in testing of fine and coarse aggregate with a readability of 0.1 g for fine aggregate, and 0.5 g for coarse aggregate, or mixtures of fine and coarse aggregate; Test sieves that conform to ASTM E11 specifications; A mechanical sieving device to create motion of the particles to bounce, tumble, or otherwise turn so as to present different orientations to the sieving surface; An oven of appropriate size capable of maintaining a uniform temperature of $110 \pm 5^\circ\text{C}$ ($230 \pm 9^\circ\text{F}$); A sieve brush; a sample container or pan; a sieve pan; a sieve stack cover; and a way to record and analysis your test finding.

The procedure for Standard Test Method for Sieve Analysis of Fine and Coarse Aggregates, we first dry the test sample in an oven at a constant temperature of $110 \pm 5^\circ\text{C}$ ($230 \pm 9^\circ\text{F}$). For this demonstration we're using a Gilson BO-350 Quincy Bench Oven.

Once sieving has completed its course, measure and record the mass weight of each sample size increment on a scale or balance to the nearest 0.1 gram. Repeat this process for each sieve and the sieve pan. The total mass of the sieved sample should match closely with original mass of test sample before sieving. If the amounts differ by more than 0.3%, based on the original dry sample mass, the results should not be used, and the test should be repeated.
