This book focuses on pulverized coal particle devolatilization, ignition, alkali metal release behavior, and burnout temperature using several novel optic diagnostic methods on a Hencken multi-flat flame burner. Firstly, it presents a novel multi-filter technique to detect the CH* signal during coal ignition, which can be used to characterize the volatile release and reaction process. It then offers observations on the prevalent transition from heterogeneous ignition to hetero-homogeneous ignition due to ambient temperature based on visible light signal diagnostics. By utilizing the gap between the excitation energies of the gas and particle phases, a new low-intensity laser-induced breakdown spectroscopy (PS-LIBS) is developed to identify the presence of sodium in the particle or gas phase along the combustion process. For the first time, the in-situ verification of the gas phase Na release accompanying coal devolatilization is fulfilled when the ambient temperature is high enough. In fact, particle temperature plays a vital role in the coal burnout process and ash particle formation. The last part of the book uses RGB color pyrometry and the CBK model to study the char particle temperature on a Hencken burner. It offers readers valuable information on the technique of coal ignition and combustion diagnostics as well as coal combustion characteristics.

Flash is a necessary and immensely creative tool that dramatically increases the opportunities of any amateur photographer. However, many amateurs find flash intimidating, unsure of where to begin. Instead, they continue limiting themselves to shooting only available light. *Understanding Flash Photography* is a guide to off-camera flash, helping free photographers from "auto" to get the images they want when natural light isn't enough. If you've been afraid to venture past natural light, here is the book that will finally help you explore the exciting possibilities of artificial light. Author Bryan Peterson starts by breaking down how flash works, then dispels the widely held myth that automatic "TTL" flash exposure is easier, explaining how to quickly master manual flash exposure to control the quality, shape, and direction of light. For the hundreds of thousands who found *Understanding Exposure* an exciting tool in moving past "auto" exposure in available light, *Understanding Flash Photography* is the essential companion to mastering the often challenging exposure puzzle.

Adventure Sports Photography, by renowned photographer and workshop leader Tom Bol, combines personal stories from field experience with expert photo technique. Aspiring outdoor photographers, both adventure sports shooters and outdoor photography enthusiasts, will find this book to be a valuable reference and guide. It covers everything an adventure sports shooter needs to know to get the shot—from packing and organizing gear for an afternoon shoot of rock climbing at the local crag to a month-long sea kayaking expedition. You'll explore composition and creative angles for stunning adventure sports images, and learn in-depth techniques for using speedlights and strobes for creative lighting when you're shooting in the field. This book also shows you how to create a sequence shot and set up an effective digital workflow. In addition to creating environmental portraits, you'll find out how to produce quality video of adventure sports. Tom Bol has been photographing adventure sports for more than 25 years, documenting adventures on every continent, and his work has been published worldwide. He is a regular contributor to *Digital Photo* magazine, and he's been recognized as one of National Geographic Adventure's "50 of America's Top Visionaries" for his photography. Tom's work has been featured by Elinchrom, LowePro, Manfrotto, and Nikon, and he is a Sandisk Extreme Team member. PDN readers voted Tom one of the photography world's best workshop leaders. He is also an instructor at Kelby Training, Maine Photo Workshops, Photo Quest Adventures, and Strabo Photo Tours.

David Busch's Nikon D500 Guide to Digital SLR Photography

I have been somewhat reluctant to write about the absolute best digital single-lens reflex camera I have ever used, the Nikon D800E. The reason is that I like to write about older cameras that have become cheaper to buy and use for the frugal photographer. Although some of the cameras I have written about were terribly expensive when first released, by now they are reasonably cheap. For example, I've written books about the Canon EOS 1DS/1DS Mark II, the Nikon D1 and the Nikon D2X. These all are pro DSLRs and as such were released at prices ranging from \$6,000 to \$8,000. By now, however, the most you will pay is around \$400 for any of them. In a few years, the Nikon D800E, too, will be much cheaper and an obvious choice for the frugal photographer. No matter the price, the D800 and D800E are two of the best DSLRs ever made. Either will change you as a photographer in fantastic ways.

With today's advanced camera technology, achieving focus on a photographic subject seems like it should be a straightforward task, but many photographers know that it can be deceptively difficult, especially when shooting moving subjects or in challenging situations. Now, there is a complete guide available for Nikon shooters that will help them get tack-sharp photos every time.

The Nikon Autofocus System, 2nd Edition, photographer Mike Hagen, author of the bestselling The Nikon Creative Lighting System, takes his deep knowledge of Nikon technology and concentrates on its focus features. In this book, which covers all current Nikon DSLR models (including the D5 and D500), Hagen fully explains how Nikon autofocus works,

including detailed discussions of all the autofocus modules, drive systems, and camera buttons and menus. He also devotes an entire chapter to explore how focus works with Nikon's lenses. Armed with this general knowledge, Hagen then dives deep and offers camera setups, settings, and best practices for specific field techniques that address the photographic genres that are notoriously challenging for focus: action and sports (indoor and outdoor), wildlife (including birds in flight), and macro photography. He also covers genres such as portrait, landscape, underwater, low-light, and street photography. Hagen not only advises on the best ways to set up the camera and focus systems, he gives helpful tips and tricks throughout the book. The Nikon Autofocus System also covers:

- Live view autofocus methods and settings
- Achieving great focus in video
- AF tracking
- AF shooting styles, such as back-button AF and shutter-release AF
- HDR, panoramas, and other techniques for shooting with a tripod
- An entire chapter on additional terms and techniques, such as hyperfocal distance, calibrating lenses, focus and flash photography, and more
