The process of globalization has had profound, often destabilizing, effects on space, at all levels (i.e. local, regional, national, international). This revealing book analyzes, both theoretically and empirically, the effects of globalization over space. It considers, through a dialogue among different paradigms, the ways in which space has become more important in the global economy. Globalization has been advocated as a way of shrinking time and space which will lead to a homogenized global market; a suggestion challenged in differing ways and with a variety of approaches by all the contributors to this volume. Leading authorities from a range of disciplines are represented amongst this impressive list of contributors, including Eric Sheppard, Bjørn Asheim, Richard Walker and Peter Swann. The chapters demonstrate persuasively the continuing, and even increasing, role of space in the global economy, and throughout, the book covers viewpoints from the fields of: international political economy economic geography regional and local economics. This impressive volume, which contains a selection of the best in contemporary scholarship, will be of interest to the international arena of academicians, policy makers and professionals in these or related fields.

The Changing Economic Geography of Globalization

The book covers Indian agricultural development from the colonial to the present period. It examines how ruling class political ideology determined the agricultural policies from colonial rule. It considers both

quantitative and qualitative aspects in all periods: colonial period to pre-green revolution phase, post-green revolution phase (early and late stages) and post-globalisation phase after 1991. India has achieved the ability to maintain food security, through enough food grain buffer stocks to meet the enormous public distribution system. But, with India's entry into WTO in 1994, euphoria has been created among all types of farmers to adopt commercial crops like cotton cost-intensive inputs. Even food grain crops are grown through use of costly irrigation and chemicalised inputs. But they lacked remunerative prices, and so farmers began to commit suicides, which crossed 3.5 lakh. Government of India attributed this agrarian crisis to the technology fatigue and gave scope for second green revolution (GR-II). GR-I was achieved by public sector enterprise, whereas the GR-II as gene revolution is a result of private sector enterprise/MNCs. There is fear that opening up of the sector may lead to handover of the family farms to big agri-multinationals. GOI's proposal to double farmers' income by 2022 is feasible only when the problems, being faced by small, marginal and tenant farmers, are addressed in agricultural marketing, credit and extension services. Now, it is time to go for suitable forms of cooperative/collective agriculture, as 85 percent of total cultivators are the small and marginal farmers. This book is co-published with Aakar Books, New Delhi. Taylor & Francis does not sell or distribute the print versions of this book in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka.

Political Economy of Agricultural Development in India

2023-24 Year Book Indian Economy & World

???? ?? ?????? ??????? (2023-24 Year Book)

This book examines the development of Welsh devolution in the context of great economic and political uncertainty. Drawing on research carried out over more than a decade, it explores whether Welsh devolution has developed the capacity to resist internal and external pressures and to continue to pursue a distinctive political and policy agenda.

Devolution and Governance

Essential Neuroscience offers medical and health professions students a concise, clinically relevant text that gives equal weight to the branches of science represented within neuroscience: anatomy, physiology, biology, and chemistry. In this balanced treatment, it distinguishes itself from other competing textbooks.

Essential Neuroscience

Presents detailed information and diagrams about human anatomy, with review questions and answers, and a comprehensive examination.

This report indicates broad support for the creation of Local Enterprise Partnerships as a way of addressing local growth. In particular the potential of LEPs to offer a greater focus on local economic needs, and build on the affinity between business, local government and other partners at a local level is recognised. Whilst it is right that LEPs should compete at certain levels it is equally important for them to collaborate, particularly with the Regional Development Agencies, where it makes economic sense. Local Enterprise Partnerships are being introduced quickly and at a time of greatly constrained public funding. There is concern that in the short term LEPs will need know how and powers and in some cases financial resources to make a positive difference. Government will need to be willing to devolve power to LEPs and in certain cases be willing to support LEPs at inception. If LEPs are to be a success, the Department's transition team will need to focus in three areas: retain RDA know-how, realising the full potential of RDA assets, and leveraging potential EU funding

Global Business and Management Research: An International Journal Vol.2, No. 2 & 3

The Government of India spends about 15% of India's GDP, which translated into a whopping expenditure budget of Rs. 48.2 trillion for 2024-25, including Rs. 11.11 trillion on capital expenditures, another 11.6 trillion on interest payments, more than Rs. 4.2 trillion on subsidies like food and fertilisers, over Rs. 5 trillion on centrally sponsored programmes in the states and many other expenditures. The budget expenditures impact everyone, individuals, households, workers, businesses and everything we care about—growth, inflation, welfare and governance of the country. This book explains everything relating to the expenditures programmes of the government. The government's tax proposals generate all-round interest. Companies worry about tax on their goods, profits, equities and bonds. Households and individuals look at the budget speech proposals how their salaries, savings and capital gains are going to be affected. The wider investment community wants to figure out the government's disinvestment, privatisation, dividends and other non-tax receipts. All the tax, non-tax, disinvestment and privatisation proposals and performance of the government have been thoroughly analysed and commented upon in the book. The economists, media, banks, foreign portfolio investors, investment managers, brokerages and everyone else with a direct or indirect stake in India's economy, savings, credit, financial markets and any other macroeconomic aspect watch very carefully, in addition to expenditure and tax proposals, the proposals of the budgets impacting macroeconomy. This book presents an in-depth analysis of the macro-economic performance of the Indian economy and the implications of budget proposals. The book is organised in four parts and 40 chapters. The first part has all the big budget numbers with highlights, the second part brings out the results and outcomes of Budget 2022-23, the third part takes a serious look at the implementation of Budget 2023-24 and the fourth part critically analyses the implications of the proposals in Budget 2024-25 presented on 23 July. All the three budgets have also been rated on a sound framework taking into account 2022-23 actuals, 2023-24 revised estimates and 2024-25 budget estimates.

The new Local Enterprise Partnerships

This book extensively examines various contemporary macroeconomic themes of India, namely growth and macro policies, tax reforms, government finances and intergovernmental fiscal transfers, banking and monetary policy, and environment and social sector policies. It has three to six chapters devoted to each of these broad themes, with the contributors being eminent economists from the region. The book serves as an excellent reference for students in economics, finance, and management, and a valuable tool for professionals such as policymakers and investment analysts and other stakeholders in the areas of global economics and finance, in general, and India in particular. Excerpt from the Foreword: "This book examines various contemporary macroeconomic themes of India: growth and macro policies, fiscal reforms, government finances and intergovernmental fiscal transfers, banking and monetary policy, and environmental and social sector policies. Forty-four eminent economists who have had the privilege of working with and learning from Dr. C. Rangarajan have contributed 25 chapters. I am sure that this book will serve as an excellent reference

for professionals such as policymakers and financial analysts, students, and other stakeholders interested in the field of economics and finance.\" - Dr. Manmohan Singh, Former Prime Minister of India and eminent economist

This book contains a prolific compilation of research papers presented at the International Conference on Intelligent Computing and Communication Techniques (ICICCT 2024). Some of its key features include: In-depth coverage of artificial intelligence, blockchain, and their role in enhancing smart living and security, with a focus on intelligent computing. Depiction of detailed system models and architecture to illustrate the practical applications of AI. Discussion on the role of AI and blockchain in banking, healthcare, navigation, communication, security, etc. Analysis of the challenges and opportunities presented by intelligent computing, communication techniques and blockchain in healthcare, education, banking and related industries. It is designed for academics, researchers, students, and professionals seeking to expand their knowledge and engage with current research on artificial intelligence, secure transactions, real-time monitoring, and security.

India's Contemporary Macroeconomic Themes

It is the aspiration of every Indian to live a good life. The measure of which is better health, education, housing and income. Only a developed economy can fulfil this aspiration of its people. India is a growing economy and dreams of becoming a \$10 trillion economy. In The \$10 Trillion Dream, the author provided the road map to fulfilling that dream. However, the performance of the Indian economy in the past few years seems to have shattered the \$10 trillion dream. This book presents a comprehensive and critical analysis of the performance of the Indian economy under the Modi government from 2019 to 2024. It critically examines the policy measures taken by the government and identifies the reasons why India can't become a \$10 trillion economy by 2035. Foregrounded in rigorous research, The \$10 Trillion Dream Dented is an unputdownable work that should encourage policymakers to rethink their approach to managing the Indian economy.

2024-25 UPP Constable 2024 Annual Current Affairs

Zero Hunger (SDG-2) and Responsible Consumption and Production (SDG-12) of the United Nations are very crucial aspects for any economy in the world. In terms of Agricultural Sustainability and Food Security, the world should see to it that agriculture is sustainable enough to ensure food security for all its people. While nobody should be deprived of food for whatever reasons and at the same time nobody should use the agricultural resources (both inputs and outputs) in a manner harmful to the society at large. The use of any resources in terms of production and consumption, and vice versa, should take into account the carbon-footprint and greenhouse gas emissions. While the producers have a major role in the optimum use of the resources, the consumers, for whatever items, should take into account the responsible consumption practices. Since production and consumption are like two sides of a coin, complementary to each other, any change in one of the aspects will have its repercussions on the other one. So, it is a collective responsibility of everyone to ensure that things are practiced the way they are supposed to.

Intelligent Computing and Communication Techniques

This study describes disparities in per capita income, in the structure of the economy, and in agrifood systems

(AFS) across states in India. We use the gross value added (GVA) obtained from state-specific agrifood value chains (AVCs) to describe the size and structure of the AFS in each state of India. This study also presents the size of employment and variability in labor productivity within the AFS across states. A special focus is given to female and youth employment in the state specific AVCs. The 2017/18 state-level social accounting matrix (SAM) for India is the primary data source for estimating statewise GVA from the AFS. Periodic Labor Force Survey data are used to estimate the size of AFS employment. Our results reveal that the bottom half of the Indian population has an average per capita income of US\$1,019, 2.5 times lower than that of the top half. India's AFS is valued at \$756 billion, or 31 percent of its GVA. Primary agriculture comprises 59 percent of the AFS, and off-farm activities the rest. The share of off-farm activities in the AFS rises moving from lower-income states to higher-income states, corroborating the theory of structural transformation. The national average share of female workers in total employment is 23 percent and the majority of women who do work are engaged in primary agriculture. The share of women employed in the primary agriculture sector does not change between low- and high-income states in India. In contrast, the share of youth in primary agriculture declines between lower- and higher-income states. Since state governments in India are empowered to design their own policy and development strategies, this study provides an important policy insight to both the federal (central) and state governments.

Airline Traffic Survey

During the 1980s Britain became one of the world's most market-oriented economies, an approach which resulted in three severe recessions and a deepening degree of inequality. This book argues that a rebalancing of the economy will remain elusive until proactive policies are implemented at the corporate and industrial level.
